<p>Investment Approach</p>	<p>The Fund is an open ended investment strategy which aims to generate long-term capital appreciation across diverse market conditions by predominantly investing in equity/equity related instruments. The portfolio construct of the investment strategy aims to capture upside potential while mitigating downside risks.</p> <p>Indicative List of Derivative Strategies:</p> <p>The Investment strategy may deploy the following the derivative strategies (not limited to), in compliance with SEBI regulations and internal risk management policies. All positions will be maintained within the overall gross exposure cap of 100% and the naked short exposure limit of 25%</p> <ul style="list-style-type: none"> • Covered Call - Hold a long position in the underlying asset and sell a call option on the same asset. Generates income but limits upside if the asset surges. • Protective Put - Buy stock and simultaneously buy a put option as insurance. • Protective Collar - Hold a long stock, buy a protective put, and sell a call. • Cash-Secured Put - Sell a put option while holding enough cash to buy the stock if assigned. • Long Call - Buy a call option to gain leveraged exposure to upside moves. • Long Put - Buy a put option for leveraged exposure to downside, or for hedging. • Bull Call Spread - Buy a lower-strike call and sell a higher-strike call (same expiry); bets on moderate upside. • Bear Put Spread - Buy a higher-strike put and sell a lower-strike put; profits from moderate declines. • Bull Put Spread - Sell a higher-strike put and buy a lower-strike put; collects premium, profits if underlying doesn't fall. • Bear Call Spread - Sell a lower-strike call, buy a higher-strike call; profits if underlying doesn't rise past lower strike price. • Calendar Spread - Sell a near-term option and buy a longer-term option at same strike; profits from time decay differential and volatility. • Straddle - Buy a call and a put at same strike and expiry; bets on big move in either direction. • Strangle - Buy OTM call and OTM put; needs big directional move, but at lower premium than straddle. • Butterfly Spread - Buy lower-strike, sell two middle-strikes, buy higher-strike options (all same expiry); limited risk/reward, bets on low volatility. • Iron Condor - Sell OTM call/put, buy further OTM call/put (four legs, same expiry); profits in narrow ranges. • Iron Butterfly - Sell ATM straddle, buy OTM call and put; higher premium than condor, profits if underlying stays flat. • Synthetic Long/Short - Create exposure equivalent to underlying with options (e.g., long call/short put = synthetic long stock). • Pair Trades - Take opposite positions in two stocks of the same sector based on bullish/bearish view. • Hedging - Taking short position in underlying stock holding to prevent downside risk. • Interest Rate Swaps (IRS): An Interest Rate Swap is an agreement whereby two parties agree to exchange periodic interest payments. The amount of interest payments exchanged is based on some predetermined principal, called notional principal amount. The amount each counter party pays to the other upon periodic interest rate multiplied by the notional principal amount. The only amount that is exchanged between the parties is the interest payment, not the notional principal amount. • Forward Rate Agreements (FRA): This is an agreement between two counterparties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date based on the notional amount, for an agreed period. In short, in an FRA, interest rate is fixed now for a future period. • Interest Rate Futures (IRF): An interest rate future is a futures contract with an interest-bearing instrument as the underlying asset. Interest rate futures are used when there is an expectation of interest rate movement adversely in a particular direction. • Credit Default Swaps (CDS): A credit default swap is a financial derivative that allows an investor to swap or offset their credit risk with that of another investor. A protection buyer buys a CDS from a protection seller, who agrees to reimburse them if the borrower defaults. <p>These are some of the derivatives where the scheme can invest. For detailed derivative strategies, please refer to SAI.</p>
<p>Risk Profile of the Investment Strategy</p>	<p>SIF Units involve investment risks including the possible loss of principal. Please read the ISID carefully for details on risk factors before investment. Investment Strategy specific Risk Factors are summarized below:</p> <p>Investment Strategy specific risk factors</p> <ol style="list-style-type: none"> 1. The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down. 2. The Scheme proposes to invest in equity and equity related instruments. Equity instruments by nature are volatile and prone to price fluctuations on a daily basis due to both micro and macro factors. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme(s) to make intended securities' purchases due to settlement problems could cause the Scheme(s) to miss certain investment opportunities. 3. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme(s) and may lead to the Scheme(s) incurring losses till the security is finally sold. 4. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Scheme(s) can go up and down because of various factors that affect the capital markets in general.

5. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the Regulatory limits, the AMC may choose to invest in unlisted securities that offer attractive yields. This may however increase the risk of the portfolio.
6. The NAV of the Scheme is likely to be affected by changes in the prevailing rates of interest.
7. The AMC may, considering the overall level of risk of the portfolio, invest in lower rated/ unrated securities offering higher yields. This may increase the risk of the portfolio.
8. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Scheme's portfolio due to the absence of a well developed and liquid secondary market for debt securities would result, at times, in potential losses to the Scheme, in case of a subsequent decline in the value of securities held in the Scheme's portfolio.
9. Different types of securities in which the scheme would invest (bonds / money market instruments etc.) as given in the Scheme Information Document carry different levels and types of risks. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. Corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
10. As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.
11. Apart from normal credit risk, zero coupon bonds carry an additional risk, unlike bonds that pay interest throughout the period to maturity, zero coupon instruments/deferred interest bonds typically would not realise any cash until maturity. If the issuer defaults, the Scheme may not obtain any return on its investment.
12. **Price-Risk or Interest-Rate Risk:** Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.
13. **Reinvestment Risk:** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
14. **Credit Risk:** In simple terms this risk means that the issuer of a debenture/bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down.
15. **Basis Risk (Interest - rate movement):** During the life of a floating rate security or a swap, the underlying benchmark index may become less active and may not capture the actual movement in interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio.
16. **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. However, depending upon the market conditions, the spreads may move adversely or favourably leading to fluctuation in the NAV.
17. **Liquidity Risk:** Due to the evolving nature of the floating rate market, there may be an increased risk of liquidity risk in the portfolio from time to time.
18. **Other Risk:** In case of downward movement of interest rates, floating rate debt instruments will give a lower return than fixed rate debt instruments.
19. **Securities Lending:** Engaging in securities lending is subject to risks related to fluctuations in collateral value and settlement/liquidity and counter party risks. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.
Short-selling of Securities: Purchasing a security entails the risk of the security price going down. Short selling of securities (i.e. sale of securities without owning them) entails the risk of the security price going up there by decreasing the profitability of the short position. Short selling is subject to risks related to fluctuations in market price, and settlement/liquidity risks. If required by the Regulations, short selling may entail margin money to be deposited with the clearing house and daily mark to market of the prices and margins. This may impact fund pricing and may induce liquidity risks if the fund is not able to provide adequate margins to the clearing house. Failure to meet margin requirements may result in penalties being imposed by the exchanges and clearing house.

Plans and Options

The Investment strategy has two Plans - Regular Plan & Direct Plan, with a common portfolio and separate NAVs. Both the Plans under the Investment strategy offer Income Distribution cum capital withdrawal Option (IDCW)^ & Growth Option. ^the amounts can be distributed out of investors capital (Equalization Reserve), which is part of sale price that represents realized gains.
